## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Christopher (US6037571) in view of Hopponen (US6437291).

Christopher discloses an electric cooking assembly/method comprising a main body (10) including a first and second cooking surface (Figure 1, 70), first and second heating elements (40, 50) independently controlled (column 2, lines 33-50) using 110-120 V power source of about 1000 to 1400 W and a current of about 8 to about 14 amps (column 2, lines 37-45), first heating element is a contoured shape (Figure 4, 240), a heat reflector, the main body includes a base (13) and a hood (18) movable relative to base (Figure 1), a first control (25) to control power to first and second heating elements, a second control (27) for first heater and a third control (29) for second heater, and a stand (16) below grill capable of housing a refrigerator. Christopher does not disclose a reflector, a second hood member, a grill cooking surface, a searing plate cooking surface, and a temperature probe. Hopponen discloses a reflector (column 5, lines 18-22), a second hood member (17, 16), a grill cooking surface (20), a searing plate cooking surface (25), and a temperature probe (100). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the reflector, second

Art Unit: 3742

hood member, grill cooking surface, searing plate, and temperature probe of Hopponen in the assembly/method of Christopher because, a reflector allows for a more uniform heating, a second hood member allows for easier access to interior without losing all of heat, a grill and searing plate allows for multiple food items to be cooked simultaneously, and a temperature probe allows the heating to be regulated more efficiently.

## Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shawntina T. Fuqua whose telephone number is (571) 272-4779. The examiner can normally be reached on Monday-Friday 8-4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on (571) 272-4777. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
